RICARDO RENDON San Francisco, CA(Open to relocation)|(530) 601-8824|rrendon@ucdavis.edu
www.linkedin.com/in/RicardoRendon-DataAnalyst Personal website: https://ricardorendonr.github.io/

Data analyst driven to solve inquiries and present results in easily understood formats. Capable of utilizing existing programs and learning new technologies to achieve an efficient interpretation and management of data.

WORK HISTORY

COOPCAREERS, San Francisco, CA August 2020-Present
Data analytics, Apprenticeship (night hours)
-Online (due to covid) apprenticeship focused on: SQL, Tableau, Google Analytics, Salesforce, Excel.

Bioventures, Davis, CA July 2020
Data analytics, 1-month contract
-Created a python script to clean and restructure the original database.
-Migrated database to Microsoft SQL Server to have a more efficient way to store and retrieve information.
-Created a data analysis dashboard and presented a data analytics report (python).
-Built a web interface using Django to store new records and to retain the data integrity of the database.

LAUNCHPAD, Davis, CA July 2019 -Sept 2019
Intern
-Created and presented data-driven strategies for campaigns and projects for non-profit agency.
Additional experience: Lift Scanner at Breckenridge Ski Resort; Vehicle Inspection at LR Travel Agency.

EDUCATION

B.S., Statistics, University of California, Davis, CA June 2019
Minor: Computer Science, GPA: 3.4

Additional coursework: October 2019 - April 2020
-Coursera: Machine Learning, Deep Learning Specialization,
Applied Data Science Python Specialization.
-Udemy: The Ultimate MySQL Bootcamp
-Udacity: Data Engineer Nanodegree

TECHNICAL SKILLS

SQL	Python	R	Tableau	Basic HTML	Basic CSS
C++ (OOP)	Octave	Excel	MS Word	Access	React Native

LANGUAGES: English and Spanish

PROJECTS

Assignment: Determined viability and return on banking loans using data exploration and variable selection.
Outcome: Achieved 92% cross-validation accuracy (logistic regression, KNN [K-nearest neighbors], random forest, and neural network) on the acceptance of a profitable loan and an average error of 1.024 for the estimated interest rate.

Assignment: Developed front end (React Native) and back end (Firebase) app similar to Instagram.
Outcome: Selected best KPI to track the performance and performed A/B testing to improve the personality (appearance) of self-designed app.

Assignment: Web scraped Craigslist to obtain data on Sacramento's house rentals (Beautifulsoup).
Outcome: Adaptable code for any location inside U.S.A. Utilized logistic regression, KNN, RFE (Recursive Feature Elimination) to predict the location of houses, and achieved 65% accuracy of prediction of the location vs. 17% for random guessing. Utilized linear regression to predict renting prices– achieved with an average error of $200.

Assignment: Analyze and select most relevant features for predicting market value of a house.
Outcome: Achieved an RMSE (standard deviation of residuals) of $30,000 utilizing LASSO, KNN and CV (cross-validation) (R).

Additional achievements include building program capable of categorizing numbers from handwriting images with 96% accuracy; utilized graphical analysis to identify bike riding patterns in the cities of Los Angeles and San Francisco.
